Projects and Activities

Mar 2026 - Apr 2026 **Chess Engine**

Designed a chess engine using C++ following all the rules of chess
Built an interactive UI for the user using the SDL graphics library
Implemented an opponent bot that played moves using an alpha beta pruning tree search on board positions
Added heuristics to score boards for positions too far deep to improve performance
GitHub: [siddharthpaul2005/Chess-Engine](https://github.com/siddharthpaul2005/Chess-Engine)

Feb 2026 - Apr 2026 **Orchestrator for Multi-Agentic Assistant**

Always-on daemon process that registers agents, enforces lifecycle, routes requests
Orchestrates multiple AI agents locally and remotely
Dispatches tasks to the agent and streams logs
Used gRPC and protobuf for communication between all components
GitHub: [siddharthpaul2005/Multidomal_MultiLangage_Agentic_Daemon_Application](https://github.com/siddharthpaul2005/Multidomal_MultiLangage_Agentic_Daemon_Application)

Mar 2025 - Mar 2025 **Block-Estate**

Built a blockchain-powered real estate platform enabling secure property ownership verification and transparent property transfers.
Implemented the entire blockchain layer using the Solana ecosystem transaction mechanisms, and integrated it with the Django backend for seamless property registration and transfer workflows.
Contributed as a core developer responsible for blockchain architecture and backend integration

Nov 2025 - Dec 2025 **Stock-Price Predictor**

Predicts stock price and market movement based on historical data
Supports dynamic selection of multiple stocks to view movement and predictions together
Fetched historical data from Yfinance, calculated indicators like Rolling average, Moving average and Bollinger Bands
Calculated predicted price of selected stocks using machine learning algorithms like Random Forest regressor and classified the stock as bullish or bearish
GitHub: [Collab Notebook Stock Prediction](#)

Skills

- **Programming Languages:** Java, C/C++, JavaScript, Python, Go, TypeScript, SQL, Bash
- **Frameworks and Programs:** HTML/CSS/JS, jQuery, React, Node.js, MySQL, Postgres, PyTorch, Pandas, SpringBoot
- **Concepts:** Algorithms, Software Development, Cryptography, Machine Learning, Git, Functional Programming

Education

June 2024 – till present **Chandigarh University** Punjab, India

- Bachelor of Engineering in Computer Science with a GPA of 8.14
- Taken courses such as: Data Structures, Computer Architecture, Computer Network, Cryptography, Operating Systems, Algorithms, Competitive Coding, Differential Equations, Probability, Statistics, AI.

Awards/Certificates

October 2025

- Ranked among the best in the Smart India Hackathon's internal selection.
