Education

June 2024 – till present

Chandigarh University

Punjab, India

- Bachelor of Engineering in Computer Science with a GPA of 7.99
- Taken courses such as: Data Structures, DBMS, Computer Architecture, Computer Network, Software Engineering, Operating Systems, Algorithms, Competitive Coding, Differential Equations, Probability, Statistics, AI.

Projects and Activities

Aug 2026 - Aug 2026

Voice-First Multilingual RAG System

Built a multilingual RAG system for extractive question-answering over the ai4bharat/MSMARCO-XI dataset, with voice input via STT Combined BM25 and dense retrieval (multilingual-e5-small) fused with Reciprocal Rank Fusion for cross-lingual search
Extracted answers directly from retrieved passages instead of using an LLM, keeping response latency under 200ms
Supported native-script input across languages (e.g. Hindi, Bengali) through the voice pipeline feeding the retrieval layer

Demo: asmodieus.vercel.app

Feb 2026 - Apr 2026

Orchestrator for Multi-Agent Assistant

Always-on daemon process that registers agents, enforces lifecycle, routes requests.
Orchestrates multiple AI agents locally and remotely and dispatches tasks to the agent and streams logs.
Used gRPC and protobuf for communication between all components.

GitHub: [siddharthpaul2005/Multidomal_MultiLangage_Agentic_Daemon_Application](https://github.com/siddharthpaul2005/Multidomal_MultiLangage_Agentic_Daemon_Application)

June 2025 - Aug 2025

CP-Companion

Built a cross-platform desktop app for competitive programmers, aggregating contests, analytics, and rankings across many coding platforms.
Built a custom backend that caches Clist API data and refreshes it 2-3x/day, cutting external calls and onboarding friction
Added AI-powered analytics surfacing weak/strong topics, common mistakes, and trend charts across platforms, plus multiplayer contest rooms (WebSockets) with public and friend leaderboards.

Demo: cpcompanion.vercel.app/

May 2026 - June 2026

Disk Analyser

A fast, cross-platform disk usage analyser — a C++ alternative to WizTree which around 210 GB drive in about 10 seconds.
Scans your entire drive in seconds and shows you exactly what's eating your disk space, with three interfaces: a CLI, an interactive TUI, and a web UI with a live treemap. Easy download and run no installation required. For windows devices only.
Operational instructions are provided in the releases page, scroll down the release page to download the release.

Binary release download: [siddharthpaul2005/DiskTree/releases/tag/v0.1.0](https://github.com/siddharthpaul2005/DiskTree/releases/tag/v0.1.0)

GitHub (source code and architecture): [siddharthpaul2005/DiskTree](https://github.com/siddharthpaul2005/DiskTree)

Skills

- **Programming Languages:** Java, C/C++, JavaScript, Python, Go, TypeScript, SQL, Bash
- **Frameworks and Programs:** HTML/CSS/JS, jQuery, React, Node.js, MySQL, Postgres, PyTorch, Pandas, SpringBoot
- **Concepts:** Algorithms, Software Development, Cryptography, Machine Learning, Git, Functional Programming

Awards/Certificates

June 2026

- Finished Machine Learning Specialization — Andrew Ng | Stanford Online & Coursera (2026)
Credential: coursera.org/share/46613b0d105f9ed9309343bad7bead
